

Meeting Minutes

Call to order

A meeting of The Zaquiry Association was held at Rm. 207 on Jun 1, 2026 2:28 PM

Attendees

Attendees included:

- Michael Rauliuc
- Ryan Bruno
- Bilal Faruqi
- Zach Schultz (leader)

Members not in attendance

Members not in attendance included:

- N/A

Agenda Items

- Proposal for media tracker culminating project
- Primary Database usage:
 - API pull from imdb, etc.
 - Stored into db via local collection
 - User can track watched, currently watching, date started/stopped
 - Separate users to locate (+ admin)
 - Write reviews (local reviews for same shows)
 - SQLite
- JFrame gui for viewing
- Writing/reading files comes from reading/exporting lists (json/csv)

Decisions

- User has to pull manually, db starts empty → local db has saved for all users
- Assuming API has fuzzy finding → searching for movies
- API must pull all metadata
- JFrame
- Users + Shows/Movies
- When importing csv/json pull from database to ensure that metadata exists
- Exporting database data as well (need watch data to come over)
 - Ex. If Moniaga wants to give another person the similar movies they watched, but they want to watch other movies, they can get another local version and import the exported from Moniaga and then have all the data

Other Notes and Information

- Usability for more marks (usefulness)
